

Xstrata Process Support

Independent Consulting and Testwork Services
For the Global Mining Industry

XPS is a licensed metallurgical engineering, technology services and test work business based in Falconbridge, Ontario, Canada that serves the global mining industry. We are available to provide quality technical expertise **for orebody characterisation, operational support, growth initiatives and project development for engineering and mining companies** in the following commodity areas:

- Nickel
- Copper
- Zinc
- Gold
- PGMs
- REE's
- Industrial Minerals

We have available a diverse mix of disciplinary expertise, plant operating skills, and knowledge of milling and metallurgical operations. XPS operates four business groups:

- **Process Mineralogy** – mineral processing testing, quantitative mineralogy, sampling and applied statistics.
- **Extractive Metallurgy** – hydrometallurgical and pyrometallurgical testing, process modeling, and on-site support.
- **Process Control** – process control and automation technologies, and engineering solutions.
- **Materials Technology** – materials engineering for the selection and testing of materials of construction, failure analysis and equipment monitoring.
